TREE CARE

.....from our roots we grow

Here at Hayes Tree Care we're a family owned and operated business, with over 20 years of experience in the tree care industry. With our extensive knowledge and understanding of Arboriculture we pride ourselves in quality and service delivery. Whether it be large scale block clearing, a full complex removal or fine formative pruning. Our fully qualified team has the skill to undertake all tasks both big and small.

Why choose us?

All our team are trained in Cert II ESI (energy safety) and Certificate III in Arboriculture, we work to Australian Standards 4373-2007 pruning of amenity trees. Providing the most up to date, technical service, and advice to both our private and commercial clients.

What we do.....

Tree Removal

There can be a variety of reasons for removing trees, but did you know that there are other options. Trees can be "Habitat Pruned" This means we remove the weak and unstable branches leaving only large timber. This method allows for trees to continue to be of use to native fauna and flora long after it has died.

Pruning

AS4373- 2007 is the Australian standards for pruning of amenity trees. Pruning helps to keep tree canopies shaped and aesthetically pleasing. Not only will this improve the look of your tree but will also assist with the overall health.

Stump Grinding

After your tree has been removed by one of our qualified Arborists you may wish to have the unsightly stump removed. We can provide the right equipment, depending on the size of the stump and the access.

Emergency and insurance works

May to October is when the Peel region is impacted by the storm season. During the summer months December to February, temperatures can soar creating a high risk of bush fire. Whatever your emergency, preparation is key to reducing the risk of a catastrophic event. At Hayes tree care we can help prepare the trees and vegetation around your property.

Hedging and shrub trimming

Trimming of your Hedges, shrubs and Palm trees will help keep your garden looking well maintained and beautifully landscaped.

Block Clearance

Hayes Tree Care can help clear your block, providing a blank canvas for your next project. Block clearing can be a big, daunting task, creating huge volumes of debris to cart away. Hayes Tree Care can remove, grind and chip all debris either removing the mulch from site or leaving it for your next garden project

Corrective bracing

Not all trees need to have limbs removed to make them safe. Did you know, by removing large limbs you can unbalance and even stress the tree into producing more weaker growth such as epicormic shoots. By using corrective bracing techniques alongside other pruning techniques such as weight reduction and formative, we retain the limbs safely while reducing the risk to people and property.

Land Care & Plant Health Advise

The natural environment is humanity's greatest asset. At Hayes tree care we are passionate about providing, free local advice on the best way to manage your property and plants.

Powerline Clearance

Our staff at Hayes Tree Care are qualified and insured to safely remove foliage that has become too close to power lines.
